

The Best Thin Microfiber and Cooling Products Are Now ECO-friendly!

We have made it easier to go green with your next order by converting all thin microfiber and most of our cooling products to our **ECO-Friendly RPET Material**.

Why go ECO-friendly with RPET material?

The main reason we went ECO-friendly is that we can help reuse recycled plastic material to contribute to the sustainability of our environment while simultaneously delivering products that look and feel better and have enhanced color vividness for an elevated branding experience.

The Eco Collection of microfiber & cooling products are now made with Post Consumer Recycled Plastic.

Benefits of Manufacturing ECO-Friendly RPET Fiber

Making recycled polyester uses 90% less water than the production of virgin polyester 🌱 70% less energy is used to make RPET fiber than virgin fiber 🌱 Recycling just one plastic bottle saves an average of 3 hours of energy from a 60w light bulb 🌱 When thirty water bottles are recycled, they create 1lb of RPET fiber.
